Care of your New Dentures

Always remove your denture nightly.

After removing the denture – brush with a denture brush and toothpaste, then soak overnight in a denture cleaner of your choice.

If you have a partial denture (containing metal) use only an overnight cleanser specifically for partials.

In the morning, brush and rinse denture before wearing.

Dentures should always be removed and cleaned and rinsed after every meal.

If you have had recent tooth extraction, you should expect the denture to gradually become looser over the next 6 – 9 months. A liner of denture acrylic will be necessary.

If you have any questions or concerns, please call our office at **(203) 758-2116**. We are here for you.
